TAIFUN®

Taifun vacuum conveying systems for vegetable processing plants

improved profitability

With the Taifun vacuum conveying technology, the waste is disposed through funnels located in the working areas and the funnels are emptied automatically. This means that it is no longer necessary to transport waste around the production area manually, in bins or carts. The Taifun system allows your staff to concentrate on more productive work.

excellent hygiene

The vacuum system feeds the material in even batches. The waste is removed from the working area automatically and instantly and no waste is left to accumulate near the working areas. The Taifun system complies with all the EU laws and regulations on surface hygiene.

safe and ergonomic

The Taifun disposal funnels can be placed near the working areas, reducing the need for your staff to lift or stretch out for anything.

reliable partnership

Our approach is to look at things from our customers' point-of-view. Our aim is to work with you to find solutions to your problems, to reduce your production costs and to improve your profitability.

superior quality

The use of the Taifun conveying system allows you to maintain a high level of quality throughout your production line. The excellent hygiene standards also help to ensure the superior quality of your end-product and an improved customer satisfaction.
